RISK PROFILE OF THE SCHEME :

A. RISK FACTORS

Mutual Fund units involve investment risk including the possible loss of principal please read the SID carefully for details on Risk factors before investments.

I. Standard Risk Factors :

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price / value / interest rates of the securities in which the scheme invests fluctuates, the value of your investment in the scheme may go up or down
- Past performance of the Sponsor/AMC/Mutual Fund does not indicate or guarantee the future performance of the scheme of the Mutual Fund
- Shriram Aggressive Hybrid Fund is only the name of the Scheme and does not in any manner indicate either the quality of the Scheme, its future prospects or the returns. Investors therefore are urged to study the terms of the Offer carefully and consult their tax and Investment Advisor before they invest in the Scheme.

- The sponsor is not responsible or liable for any loss resulting from the operation of the scheme beyond the initial contribution of Rs. 1 Lakh made by it towards setting up the Fund
- The present scheme is not a guaranteed or assured return scheme
- There is no assurance or guarantee that the objective of the mutual fund will be achieved
- There is no guarantee or assurance on the frequency or quantum of IDCWs (which shall be at the discretion of the AMC/Trustee and also depend on the availability of adequate distributable surplus) although there is every intention to declare IDCWs in Income Distribution cum Capital Withdrawal option.
- Mutual Fund Investments are subject to market risks, read all scheme related document carefully.

II. Scheme Specific General Risk Factors

Some of the specific risk factors related to the scheme include but are not limited to the following,

- The performance of the scheme may be affected by the corporate performance, macro-economic factors, changes in Government policies, general levels of interest rates and risk associated with trading volumes, liquidity and settlement systems in the securities markets.
- Low trading volumes, settlement periods and transfer procedures may restrict the liquidity of the scheme's investments. Transacting may become difficult due to extreme volatility in the market resulting in constriction in volumes. Additionally, changes in the SEBI/ RBI regulations/Guidelines may have an adverse impact on the liquidity of the scheme. Different segments of the Indian financial markets have different settlement periods, and such period may be extended significantly by unforeseen circumstances. The length of time for settlement may affect the Scheme in the event the Scheme has to meet an inordinately large number of redemption requests. In addition, the Trustee at its sole discretion reserves the right to limit or withdraw sale and/or repurchase/redemption and/or switching of the units in the scheme (including any one of the Plans of the scheme) temporarily or indefinitely under certain circumstances. For details refer the Section 'Right to limit redemptions'. The scheme will retain certain investments in cash or cash equivalent for the day to day liquidity requirements.

III. Risk associated with investments in equities and equity related instruments

- Market Risk : The scheme proposes to invest in equity and equity-related securities. Prices, trading volumes, settlement periods and transfer procedures may restrict liquidity of investments in equity and equity-related securities. Market risk is a risk which is inherent to an equity investment.
- Liquidity Risk : Risk will be monitored in terms of the number of days it takes to liquidate every stock in the portfolio assuming a share of the average volume traded over the previous one year. Efforts would be made to keep the average liquidation period under prudent limits prescribed internally. While securities that are listed on the stock exchange carry lower liquidity risk, the ability to sell these investments may be limited by overall trading volumes of the stock exchanges.
- While mid cap and small cap stocks give one an opportunity to go beyond the usual large blue chip stocks and present possible higher capital appreciation, it is important to note that mid/small cap stocks can be riskier and more volatile on a relative basis. Therefore, the risk levels of investing in small cap and mid cap stocks is more than investing in stocks of large well-established companies

Please note that over a time these two categories have demonstrated different levels of volatility and investment returns and it is important to note that generally, no one class consistently outperforms the others. While smaller and medium size companies may offer substantial opportunities for capital appreciation, they also involve substantial risks. Historically, these companies have been more volatile in price than larger company securities, especially over the short term. Among the reasons for the greater price volatility are the less certain growth prospects of smaller companies, the lower degree of liquidity in the markets for such securities, and the greater sensitivity of smaller companies to changing economic conditions. Smaller companies carries large amount of liquidity risk compared to the Large Cap companies, as the ability to sell is limited by overall trading volume in the securities, which it invests. In addition, smaller companies may lack depth of management, be unable to generate funds necessary for growth or development, or be developing or marketing new products or services for which markets are not yet established and may never become established. They could also suffer from disadvantages such as - outdated technologies, lack of bargaining power with suppliers, low entry barriers and inadequate management depth. Overall, the risks of investing in medium / small companies are (a) transparency/liquidity levels may not be on par with established, large companies; (b) corporate governance may be an issue with some companies; and (c) they may not be resilient enough to withstand shocks of business/economic cycles.

- Securities which are not quoted on the stock exchanges are inherently illiquid in nature and carry a larger liquidity risk in comparison with securities that are listed on the exchanges or offer other exit options to the investors, including put options. The AMC may choose to invest in unlisted securities that offer attractive yields within the regulatory limit. This may however increase the risk of the portfolio. Additionally, the liquidity and valuation of the Scheme's investments due to its holdings of unlisted securities may be affected if they have to be sold prior to the target date of disinvestment.

- The scheme may invest up to 5% of its net assets in unlisted equity and equity related instruments which could affect the liquidity of the scheme.

IV. Risks associated with investments in debt and money market instruments

- Interest rate risk :** This risk results from changes in demand and supply for money and other macroeconomic factors and creates price changes in the value of debt instruments. Consequently, the Net Asset Value of the scheme may be subject to fluctuation. Changes in the interest rates may affect the Scheme's Net Asset Value as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. Prices of long term securities generally fluctuate more in response to interest rate changes than do short-term securities. Indian debt markets can be volatile leading to the possibility of price movements up or down in fixed income securities and thereby possible movements in the NAV. This may expose the schemes to possible capital erosion.
- Credit risk or default risk :** This refers to the risk that an issuer of a fixed income security may default (i.e. will be unable to make timely principal and interest payments on the security). Default risk / credit risk arises due to an issuer's inability to meet obligations on the principal repayment and interest payments. Because of this risk corporate debentures are sold at a yield above those offered on Government Securities, which are sovereign obligations and free of credit risk. Normally the value of a fixed income security will fluctuate depending upon the changes in the perceived level of credit risk as well as any actual event of default. The greater the credit risk, the greater the yield required for someone to be compensated for the increased risk.
- Liquidity or Marketability Risk :** This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is today characteristic of the Indian fixed income market.
- Market risk :** This risk arises due to price volatility due to such factors as interest sensitivity, market perception or the credit worthiness of the issuer and general market liquidity, change in interest rate expectations and liquidity flows. This may expose the schemes to possible capital erosion.
- Reinvestment risk :** This risk refers to the interest rate levels at which cash flows received for the securities in the Scheme is reinvested. Investments in debt instruments are subject to reinvestment risks as interest rates prevailing on interest or maturity due dates may differ from the original coupon of the bond, which might result in the proceeds being invested at a lower rate. The additional risk from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.
- Certain fixed income securities give an issuer the right to call its securities, before their maturity date, in periods of declining interest rates. The possibility of such pre-payment risk may force the fund to reinvest the proceeds of such investments in securities offering lower yields, thereby reducing the fund's interest income.
- Different types of securities in which the scheme would invest as given in the Scheme Information Document carry different levels and types of risks. Accordingly the scheme's risk may increase or decrease depending upon its investment pattern.
E.g. corporate bonds carry a higher amount of risk than Government securities. Further even among corporate bonds, bonds which are AAA rated are comparatively less risky than bonds which are AA rated.
- The scheme may invest in non-publicly offered debt securities. This may expose the scheme to liquidity risks.
- Money market securities, while fairly liquid, lack a well-developed secondary market, which may restrict the selling ability of the scheme.

V. Risks associated with Investing in Derivatives

- Derivatives are high risk, high return instruments as they may be highly leveraged. A small price movement in the underlying security could have a large impact on their value and may also result in a loss. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.
- Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.
- While Futures markets are typically more liquid than the underlying cash market, there can be no assurance that ready liquidity would exist at all points in time for scheme to purchase or close out a specific futures contract.
- In case of buying options either call/put, the maximum loss would be the premium paid in case of options expiring out of the money.
- The risks associated with futures are similar to those associated with equity investments. Additional risks could be on account of illiquidity and potential mis-pricing of the futures and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.
- The Long position in the Nifty will have as much loss as the gain in the short portfolio if hedged completely and would be vice versa if we were holding long portfolio, short Index.

- The Stock Exchange may impose restrictions on exercise of options and may also restrict the exercise of options at certain times in specified circumstances and this could impact the value of the portfolio.
- The Scheme may find it difficult or impossible to execute derivative transactions in certain circumstances. For example, when there are insufficient bids or suspension of trading due to price limit or circuit breakers, the Scheme may face a liquidity issue.
- Interest rate swaps and FRA require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that the derivative adds to the portfolio and the ability to forecast failure of another party (usually referred to as the "counter-party") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mis-pricing or improper valuation of derivatives, the credit risk where the danger is that of a counter-party failing to honor its commitment, liquidity risk where the danger is that the derivative cannot be sold at prices that reflect the underlying assets, rates and indices, and price risk where the market price may move in adverse fashion.

Risk Mitigation Factors :

Equity :

- Liquidity Risk :** The fund will try to maintain a proper asset-liability match to ensure redemption payments are made on time and not affected by illiquidity of the underlying stocks.
- Concentration Risk :** The scheme will be investing in a well diversified equity portfolio across industry sectors the risk of any one or few industry sectors underperforming or generating below market returns can be mitigated. Therefore as part of the Fund Management process it will always be our strategy to invest in a wider basket of equity stocks with representation from a multitude of industry sectors such that there is no concentration of investments in Securities in one or a few sectors and also based on market conditions the fund manager would use his discretion and judgment to be overweight, underweight or equal weight on certain sectors based on their respective market outlook
- Generally, diversification across market cap segments also aids in managing volatility and ensuring adequate liquidity at all times.
- Derivatives Risk :** The fund will endeavour to maintain adequate controls to monitor the derivatives transactions entered into.

Debt

- Interest Rate Risk :** The Fund seeks to mitigate this risk by keeping the maturity of the scheme in line with the interest rate expectations.
- Credit risk or default risk :** The Fund would predominantly invest in high investment grade fixed income securities rated by SEBI registered credit rating agencies. Historical default rates for investment grade securities (BBB and above) have been low.
- Reinvestment Risk :** Reinvestment risks will be limited to the extent of coupons received on debt instruments, which will be a very small portion of the portfolio value.
- The scheme may take positions in interest rate derivatives to hedge market/interest rate risks.
- Liquidity or Marketability Risk :** The fund will endeavour to minimise liquidity risk by investing in securities having a liquid market.
