Investment Strategies

An open-ended actively managed debt scheme investing in money market instruments with maturity up to 1 year. The investment strategy would be towards generating regular returns through a portfolio of Money Market instruments seeking to capture the term and credit spreads. The Scheme shall endeavor to develop a well-diversified portfolio of money market instruments. Investments made from the net assets of the Scheme would be in accordance with the investment objective of the Scheme and the provisions of the SEBI (MF) Regulations. The AMC will strive to achieve the investment objective by way of a judicious portfolio mix comprising of Money Market Instruments. Every investment opportunity in Money Market Instruments would be assessed with regard to credit risk, interest rate risk, liquidity risk and concentration risk. The scheme may also undertake repo transactions in corporate debt securities, investments in credit default swaps, mutual fund units, units of CDMDf, in accordance with the directions issued by RBI and SEBI from time to time.

Derivatives Strategy: The Scheme may take exposure to debt derivatives like Interest Rate Swaps, Interest Rate Futures, Forward Rate Agreements or other derivative instruments for the purpose of hedging / non hedging, portfolio rebalancing and other purposes, as permitted by regulations from time to time. Such exposure to derivative instruments will be in line with the investment objective and overall strategy of the scheme. Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund

	manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies. The risks associated with the use of derivatives are different from or possibly greater than the risks associated with investing directly in securities and other traditional investments. Portfolio Turnover: Portfolio Turnover is a term used to measure the volume of trading that occurs in a Scheme's portfolio during a given time period. The Scheme has no specific target relating to turnover of securities, given the low liquidity in the debt market. However, the turnover is guided by sale and purchase of securities arising out of the purchase and redemption of Units. Trading opportunities may arise due to changes in system liquidity, interest rate policy announced by RBI, shifts in the yield curve, change or anticipation of change in the credit worthiness or credit rating of securities or any other factors, which may lead to increase in the turnover. The fund manager will endeavour to optimize portfolio turnover to maximize gains and minimize risks keeping in mind the cost associated with it. Risk Control: Investments made from the net assets of the Scheme would be in accordance with the investment objective of the Scheme and the provisions of the SEBI (MF) Regulations. The AMC will strive to achieve the investment objective by way of a judicious portfolio mix comprising of Debt and Money Market Instruments. Every investment opportunity in Debt and Money Market Instruments would be assessed with regard to credit risk, interest rate risk, liquidity risk, derivatives risk and concentration risk.
